

Blue River Technologies Geotextile Hopper Dewatering

The Blue River Technologies Geotextile Hopper Dewatering Bag can be purchased to fit 1 cu yard to 5 cu yard self dumping hoppers.

A complete de-watering package will include a flocculant mixing and injection system, a sludge mixing manifold as shown above and the bag and drainage mat that will fit into the hopper. The hopper will need to have drainage ports installed to allow the effluent to flow out of the bottom of the hopper.

The Container Bags dewater rapidly. The wasting operation can be repeated over and over until the bag is full. Typical solids recapture is over 99%. The contents of the bag will easily pass a land fill paint filter test.

Installing the drainage netting

Hopper Bag ready for use.

Front Load Hopper Bags are Available for 3yd or 5 yd containers.
